

ABSTRACT OF THE DISCLOSURE

A tamper evident electronic module comprises an electronic component, a tamper evident sheet, and encapsulant material. Said component is
5 encapsulated in said encapsulant material and said sheet overlies said component, and said sheet comprises a flexible multi-layer sheet, a plurality of said layers of said sheet being selected from the group below:-

- (i) an electromagnetic radiation shield layer;
- 10 (ii) a tell-tale electrically conductive trip wire defining a convoluted meandering pathway on said layer, said trip wire meandering in a pattern which substantially covers said electronic component in a space filled area if said layer;
- (iii) a layer having the features of (ii), and in which the pathway
15 comprises a fractal pattern;
- (iv) a layer having the features of (ii), and in which a second tell-tale trip wire extends alongside a first tell-tale trip wire so that they meander as a spaced pair.
- (v) an active electromagnetic marking layer adapted to emitt
20 electromagnetic radiation.
